Lab 6

Step 1:- Display 20 random numbers using JavaScript and use for loop. Display those numbers on the website.

Step 2:- Store those 20 random numbers in an array

Step 2:- Display current Date and time after the random number using the JavaScript date function

Step 3:- Date and time should update every 1 second and page should show the updated date and time

Step 4:- Now the numbers sorted in the array, check which of them are even and print them out on the website.
